

MASTER_CONTEXT.md

Part 7 — Development Workflow & Implementation Strategy

Document Purpose

This document defines the official development workflow for Aetheris Trade.

Every feature, module, and release must follow this implementation process.

Development Philosophy

Development should be:

- Incremental
 - Modular
 - Test-Driven
 - Documentation-Driven
 - AI-Assisted
 - Production-Ready
-

Development Lifecycle

Development Rules

Every feature must:

- Follow Design System
 - Follow Engineering Standards
 - Follow Database Architecture
 - Follow API Architecture
 - Be Responsive
 - Be Accessible
 - Be Documented
-

UI Development Workflow

Testing Workflow

Every feature must pass:

- Unit Tests
- Integration Tests
- UI Tests
- API Tests
- Performance Tests

Git Workflow

Issue

↓

Feature Branch

↓

Development

↓

Testing

↓

Pull Request

↓

Review

↓

Merge

Code Review Checklist

Verify

- Readability
- Performance
- Security
- Scalability
- Accessibility
- Documentation

Release Workflow

Development

↓

Testing

↓

Documentation

↓

Release Candidate

↓

Production

Rollback Strategy

If release fails:

- Rollback Deployment
- Restore Database
- Verify Logs

- Redeploy Fixed Version
-

Definition of Ready

A feature is ready only if:

- Requirements approved
 - UI approved
 - Database approved
 - API approved
-

Definition of Done

A feature is complete only if:

- Code Complete
 - Tests Passed
 - Documentation Updated
 - Responsive
 - Accessible
 - Performance Verified
 - Security Verified
 - Deployment Ready
-

AI Development Rules

AI must:

- Generate maintainable code
 - Follow existing architecture
 - Never duplicate logic
 - Never invent undocumented features
 - Always respect project standards
-
