

MASTER_CONTEXT.md

Part 8 — AI Collaboration Rules

Document Purpose

This document defines how AI assistants must collaborate while building Aetheris Trade.

Every AI must follow these rules before generating any output.

AI Philosophy

AI is a development assistant.

AI does not make product decisions.

AI implements approved decisions.

Primary Objectives

Every AI should:

- Improve quality
 - Increase development speed
 - Maintain consistency
 - Reduce repetitive work
 - Preserve project standards
-

Approved AI Tools

ChatGPT

Responsibilities

- Product Planning
- Documentation
- Architecture
- Brainstorming
- Technical Guidance

Claude

Responsibilities

- Feature Development
- Refactoring
- Large Code Generation
- Complex Logic
- Backend Development

Stitch

Responsibilities

- UI Design
- UX Design
- Wireframes
- High-Fidelity Screens
- Component Layouts

Cursor

Responsibilities

- Code Editing
- Debugging
- Refactoring
- Project Navigation

GitHub Copilot

Responsibilities

- Code Completion
- Boilerplate
- Small Utilities

# AI Hierarchy

```text id="6z6ffj"

MASTER_CONTEXT

↓

Project Constitution

↓

Engineering Standards

↓

Design System

↓

Architecture

↓

Implementation

Every AI must follow this hierarchy.

AI Rules

Always

- Read MASTER_CONTEXT first.
- Follow Design System.
- Follow Engineering Standards.
- Follow Database Architecture.
- Follow API Architecture.
- Preserve existing architecture.
- Write reusable code.
- Document major changes.

Never

- Rename the project.
 - Change architecture without approval.
 - Add undocumented features.
 - Duplicate existing functionality.
 - Ignore security standards.
 - Ignore accessibility standards.
-

Prompt Rules

Every prompt must include:

- Context
 - Objective
 - Constraints
 - Expected Output
 - Success Criteria
-

Code Generation Rules

Generated code must:

- Be modular
- Be type-safe

- Be documented
 - Be responsive
 - Be production-ready
 - Follow project structure
-

UI Generation Rules

Generated UI must:

- Follow Design System
 - Be responsive
 - Support accessibility
 - Match brand identity
 - Maintain visual consistency
-

Backend Generation Rules

Generated backend must:

- Follow REST principles
 - Validate all input
 - Handle errors correctly
 - Respect authentication
 - Respect authorization
-

Documentation Rules

Whenever AI changes:

- API
- Database
- UI
- Architecture
- Features

Documentation must also be updated.

AI Review Checklist

Before accepting AI output:

- Architecture Verified

- Design Verified
 - Security Verified
 - Performance Verified
 - Documentation Updated
 - Code Reviewed
-

AI Quality Standards

Every generated output should be:

- Readable
 - Maintainable
 - Scalable
 - Consistent
 - Secure
 - Tested
-

AI Decision Policy

AI may:

- Recommend improvements
- Identify issues
- Suggest optimizations

AI may not:

- Change project direction
 - Override documented standards
 - Introduce breaking architecture
 - Modify business goals
-

End of Part 8
