Part 2 — Governance, Workflow & Quality Assurance

Decision Making Framework

Every new feature must answer:

1. Does it align with the Product Vision?
2. Does it improve user experience?
3. Does it support financial education?
4. Is it technically maintainable?
5. Can it scale in the future?

If any answer is **No**, the feature must be redesigned or rejected.

Feature Approval Process

Change Management

Every significant change must include:

- Purpose
 - Impact Analysis
 - Risk Assessment
 - Rollback Strategy
 - Documentation Update
-

Version Control Policy

Major Version

- Architecture changes
- Breaking changes

Minor Version

- New features
- Enhancements

Patch Version

- Bug fixes
 - Documentation updates
-

Quality Assurance Principles

Every release must satisfy:

- Functional correctness
 - UI consistency
 - Accessibility
 - Performance
 - Security
 - Documentation completeness
-

Code Review Policy

Every Pull Request requires:

- Architecture review
- Code quality review

- Performance review
- Security review
- Documentation verification

No direct commits to the production branch.

Documentation Policy

Documentation must always remain synchronized with implementation.

Whenever one of the following changes:

- Database
- API
- UI
- Architecture
- Features

The corresponding document must also be updated.

Security Policy

Mandatory Requirements

- Authentication
 - Authorization
 - Input Validation
 - Output Sanitization
 - Secure Environment Variables
 - HTTPS Only
 - Audit Logging
-

Performance Policy

Targets

- Fast initial load
- Optimized bundle size
- Efficient database queries
- Minimal API latency
- Responsive interactions

Performance regressions must be resolved before release.

Accessibility Policy

The application must support:

- Keyboard navigation
- Screen readers
- High contrast
- Responsive layouts
- Accessible forms

Accessibility is mandatory.

AI Collaboration Policy

AI tools may assist with:

- UI generation
- Code generation
- Documentation
- Testing
- Refactoring

Human review is mandatory before merging generated code.

Project Success Metrics

Success is measured by:

- Stable releases
 - High performance
 - Maintainable code
 - Consistent design
 - Positive learning outcomes
 - User satisfaction
-

Governance Checklist

Before every release:

- Documentation updated
- Code reviewed
- Tests passed
- Performance verified
- Security verified

- Accessibility verified
 - Deployment approved
-
